PARHAM PARVIZ FARZAM

Senior Cyber Security Specialist | Offensive Security | Penetration Testing | Red Teaming
Edmonton, Alberta | +1 (780) 394-9197 | parham.parvizfarzam@gmail.com | Website | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Cyber Security Specialist with 6 years of hands-on experience in offensive security, including penetration testing, red teaming, adversary simulation, vulnerability validation, and application security assessments across enterprise, web, API, and network environments. Experienced in combining automated scanning with deep manual testing using tools such as Nessus, Nuclei, Burp Suite, Nmap, and Metasploit. Proven record of collaborating with SOC, infrastructure, and security teams to improve detection coverage, validate third-party findings, strengthen EDR controls, and deliver practical remediation guidance.

CORE SKILLS

- **Offensive Security:** Penetration Testing, Red Teaming, Adversary Simulation, Vulnerability Validation, Threat Modeling, Social Engineering, Phishing Assessments, Third-Party Report Validation, AI/ML Penetration Testing
- **Application & Network Security:** Web Application Security, API Security, OWASP Top 10, OWASP ASVS/WSTG familiarity, Internal/External Network Testing, Active Directory Security, Attack Path Analysis, Application Security (SAST/DAST/SCA)
- **Tools & Platforms:** Burp Suite, Nessus, Nuclei, Nmap, Metasploit, CALDERA, VECTR, Splunk, ESET, Bitdefender, Linux, Windows, Microsoft Azure, AWS fundamentals
- **Programming & Scripting:** Python, PowerShell, Bash, C/C++, Rust, JavaScript

PROFESSIONAL EXPERIENCE

Penetration Tester / Red Team Operator | Blu Bank *Apr 2023 - Jun 2026*

- Performed internal and external penetration tests across enterprise infrastructure, web applications, and network environments to identify exploitable weaknesses and improve security posture.
- Combined broad automated discovery with manual validation by using Nessus and Nuclei for large-scale scanning, then Burp Suite and other offensive security tools to verify findings and uncover deeper attack paths.
- Executed MITRE ATT&CK-based adversary simulations in lab environments using CALDERA and VECTR to help the SOC team develop and tune detection use cases.
- Tested endpoint security controls and helped strengthen EDR solutions, including ESET and Bitdefender, by creating or recommending custom detection rules based on attack simulation results.
- Ran phishing campaigns and security validation exercises to assess resilience and support security awareness efforts.
- Reviewed and validated third-party penetration testing reports to confirm technical accuracy, exploitability, and remediation quality before findings were accepted by stakeholders.
- Worked closely with SOC, security operations, and technical stakeholders to translate offensive security findings into actionable improvements with clear risk context.

Penetration Tester / Red Team Operator | APK Group *Feb 2020 - Apr 2023*

- Delivered internal and external network penetration tests, vulnerability assessments, and web security testing for multiple client organizations across different industries.
- Scoped and executed security assessments against diverse infrastructures, rapidly understanding new environments and identifying realistic attack paths, privilege escalation opportunities, and high-impact misconfigurations.
- Performed manual and tool-assisted testing of web applications, network services, and Active Directory environments, with focus on accurate validation and practical remediation guidance.
- Supported client security improvement efforts by documenting reproducible findings, explaining technical risk clearly, and collaborating with technical teams during remediation and retesting.

SELECTED ACHIEVEMENTS

- Improved blue-team readiness by mapping offensive testing results to MITRE ATT&CK techniques and detection use cases.
- Strengthened endpoint detection coverage through offensive validation and custom rule recommendations for enterprise EDR controls.
- Built credibility with stakeholders by validating third-party pentest reports and distinguishing true risk from false positives or overstated findings.
- Brought strong cross-functional teamwork to offensive security engagements by partnering with SOC analysts, security teams, and technical owners.

EDUCATION

Master's in Information Security | Iranian University

Bachelor's in Accounting | Islamic Azad University (IAU)
